8 IDSR Report

9 All events currently being monitored

This Weekly Bulletin focuses on public health emergencies occurring in the WHO African region. This week's articles cover:

- [Humanitarian crisis in Mali](#)
- [Polio in the Democratic Republic of the Congo](#)
- [Diphtheria in Mauritania](#)

For each of these events, a brief description, followed by public health measures implemented and an interpretation of the situation is provided.

A table is provided at the end of the bulletin with information on all new and ongoing public health events currently being monitored in the region, as well as recent events that have been controlled and closed.

Major issues and challenges include:

- The “World Polio Day”, celebrated every 24 October, provides a platform for the international community to highlight global efforts and progress made in the fight against polio. Although certified as a “Polio-free country” since November 2015 regarding indigenous Wild Poliovirus, the Democratic Republic of the Congo is the most affected country in the WHO African region for vaccine derived polioviruses outbreaks. Since 2017, circulating vaccine-derived polioviruses have been reported with the outbreak spreading to new health districts over time. Tailored public health interventions, including vaccination campaigns should be sustained to control the outbreak.
- Mauritania is currently experiencing a suspected outbreak of Diphtheria in Bassiknou district, in Hodh el Chargui region, bordering Mali, with all reported cases from health facilities. The presence of Malian refugees' camps in Bassiknou, with occasional increases in population size, underscores the necessity to enhance public health interventions, including vaccinations, and promptly address the population's needs.

Mali

Humanitarian Crisis

EVENT DESCRIPTION

The complex humanitarian crisis in Mali remains dire, mainly in the northern and central areas of the country. Increasing armed conflict has resulted in preventive displacements in Kidal, Gao and Timbuktu regions. In August 2023, over 30 000 people were displaced within Timbuktu, and Taoudénit regions or from these regions to neighboring countries. Moreover, 5 400 people from Kidal region have either been displaced to safer locations within the region or have sought refuge in neighboring Algeria. Ultimately, displacements occurred in Tessit and N'tillit communes of the Gao region, and in Ber commune of the Timbuktu region, following attacks by armed groups.

Since the beginning of the year until the end of September 2023, nine attacks on healthcare facilities have been recorded, with the most recent attack leading to the death of an auxiliary health worker in Teherdje village.

In addition, Mali is facing multiple concurrent outbreaks compounded by erratic rains which are continuing to nurture food insecurity and increase the humanitarian health needs. By December 2023, nearly one million children under 5 will be at risk of acute malnutrition, with a projected starvation death rate of 20.0% (n=200 000). In Menaka region, almost 76 000 people are in Integrated Food Security Phase Classification (IPC) phase 4, and more than 2 500 people, in IPC phase 5. An increase in malaria cases has been recorded from epidemiological week 36 to week 42 (ending 22 October 2023), with a cumulative total of 1 538 104 cases reported, to date. Furthermore, the country is experiencing a Dengue fever and chikungunya outbreak, with an increase in Dengue cases observed since epidemiological week 40.

PUBLIC HEALTH ACTIONS

- Under the leadership of the United Nations Office for the Coordination of Humanitarian Affairs, humanitarian partners continue to support the Government response to the crisis through multi-sectoral technical and financial assistance. The 2023 Humanitarian Response Plan developed to address

the needs of 8.8 million people and estimated to cost 751.5 million is currently funded at 24.0% to date.

- WHO and partners continue to actively support the health cluster response through the deployment of mobile clinics to affected areas, psychosocial support to affected populations, and outbreak preparedness and response interventions.
- WHO recently supported the deployment of malaria and measles kits in Tombouctou, Gao, Menaka and Mopti regions.
- WHO and GiZ provided technical and financial support to the Ministry of Health for a functional simulation exercise at the Public Health Emergency Operation Department in Bamako from 25 to 26 September 2023.
- The project "Assistance médicale et nutritionnelle aux populations affectées par le conflit dans la région de Bandiagara", funded by USAID/BHA and aiming at providing free healthcare and food assistance to the crisis-affected population in Bandiagara commune of Mopti region, was launched on 29 September 2023.
- WFP and nutrition cluster partners continue to provide humanitarian air services and emergency food assistance, especially in Menaka region
- UNICEF and Water, Sanitation and Hygiene (WASH) cluster partners continue to support WASH activities, including provision of potable water, construction of WASH facilities in schools and households, distribution of women hygiene kits, etc.

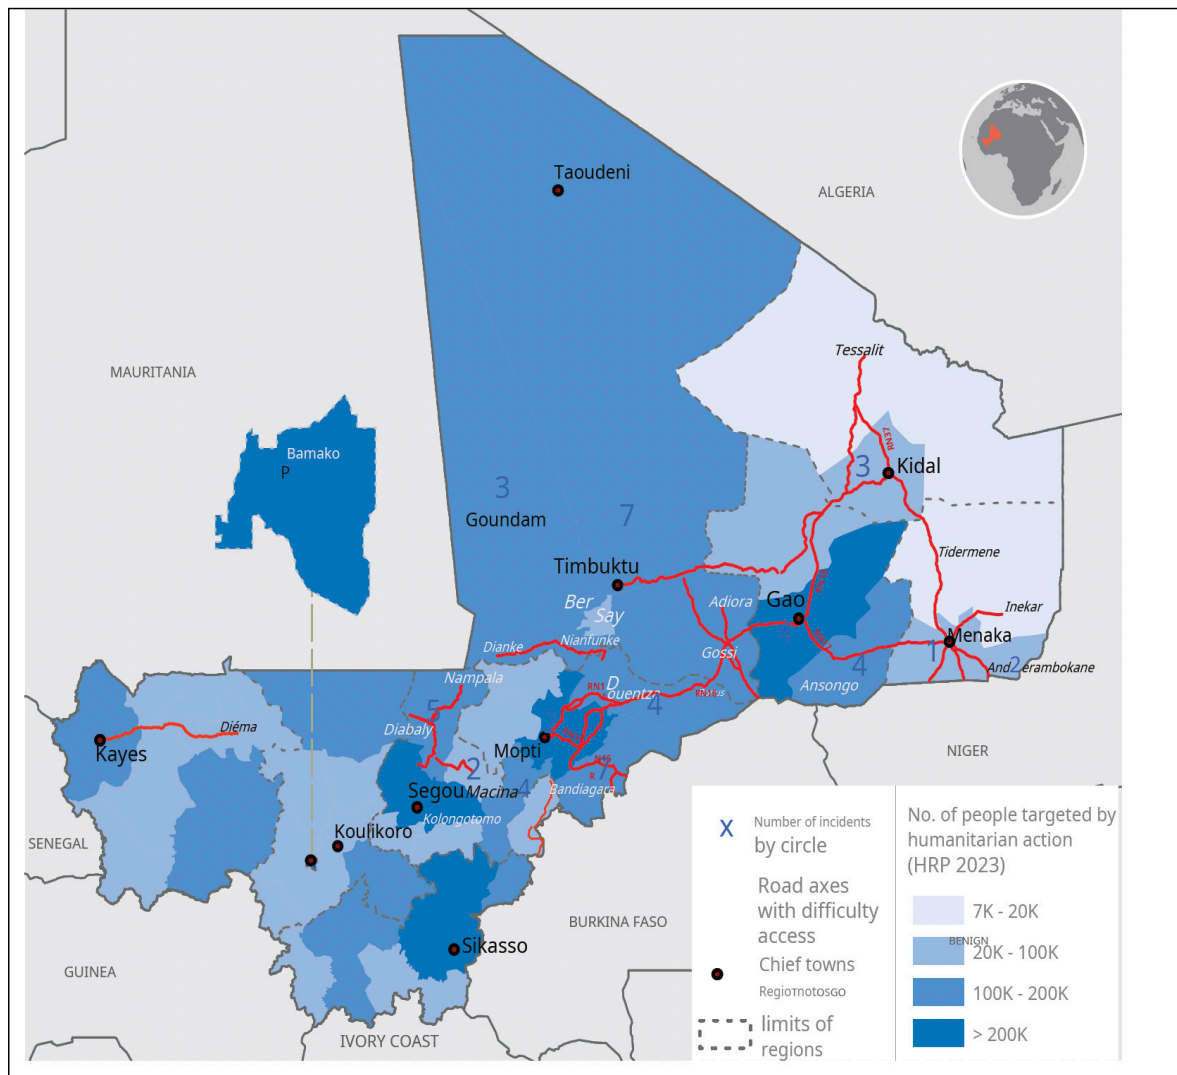

SITUATION INTERPRETATION

The complex and protracted humanitarian crisis in Mali remains of concern, with populations being affected by armed conflicts, food insecurity, several disease outbreaks, and suboptimal living conditions. Additional compounding factors, including the limited implementation of the 2023 Humanitarian Response Plan, as well as the ongoing withdrawal of the United Nations Multidimensional Integrated Stabilization Mission in Mali, could contribute to worsening the socio-sanitary and security situation of the affected populations. The Government of Mali with its partners should scale up resource mobilization to efficiently support to the humanitarian crisis response.

Cases	Deaths	CFR

Polio (cVDPV1 and cVDPV2)

EVENT DESCRIPTION

The Democratic Republic of the Congo (DRC) was certified “wild Polio-free country” by WHO since November 2015 following zero case of wild Polio reported in the country since December 2011. However, regarding vaccine derived polio outbreak, the country is the most affected in the WHO AFRO region reporting both circulating vaccine-derived polioviruses (cVDPV1 and cVDPV2 cases).

Since 2017, the country has experienced 23 outbreaks of vaccine derived Polio, reported in 181 health zones across 24 provinces. Of the 23 reported outbreaks, 14 (61.0%) ended and nine (39.0%) are still ongoing, with most cases reported in the southeastern part of the country, over the last two years (2022 and 2023).

During epidemiological week 41 (ending 15 October 2023), two new cases of cVDPV1 were reported from two newly affected health zones: Kiambi in Tanganyika province and Mufunga-Sampwe in Haut Katanga province. Furthermore, 33 environmental samples collected in the provincial sites of Kinshasa, Equateur, Haut Katanga, and Lualaba tested positive for cVDPV2, of which 85.0% (n=25) were from Kinshasa province.

From epidemiological week 1 to week 41, a total of 186 confirmed circulating vaccine-derived poliovirus (cVDPV) including 79 (42.5 %) cVDPV1 and 107 (57.5%) cVDPV2 have been reported. Haut Katanga and Tanganyika provinces were the most affected, with 44 cases (33 cVDPV1 and 11 cVDPV2) and 41 cases (36 cVDPV1 and 5 cVDPV2) respectively.

From 1 January to 19 October 2023, a cumulative total of 3 630 AFP cases have been reported in 98.0% (n=509) of the 519 health districts, with an estimated no polio AFP rate of 7.2 per 100 000 population of less than 15 years old (country target: $\geq 3/100\,000$). Nearly 60.0% (n=2 083) of the AFP cases were notified by healthcare providers (n= 2 083), followed by community health workers (36.0%, n=1 310), relatives (3.1%, n=113), traditional healers (0.5%, n=21) and non-government organizations (0.4%, n=16).

The percentage of AFP cases notified within 7 days of the onset of paralysis was 67.1% (target: $\geq 80\%$), and

only 9.1% (target: $\geq 80\%$) of the collected samples reached the laboratory for investigation within 3 days or less; the remaining samples arrived late.

Since 2017 and as of 20 October 2023, there have been a cumulative total of 23 648 AFP cases, with 938 (4.0%) confirmed polio cases including 722 (77.0%) cVDPV2 and 216 (23.0%) cVDPV1. The highest number of cases was reported in 2022 with a total of 520 (55.4%) confirmed cVDPV cases, including 377 cVDPV2 and 143 cVDPV1. Haut Lomami and Tanganyika provinces reported most cases with 185 cases (103 cVDPV1 and 82 cVDPV2) and 163 cases (103 cVDPV1 and 82 cVDPV2) respectively.

From 20 October 2022 to 19 October 2023, of the 3 644 reported AFP cases, 46% (n=1 676) of those aged between 6- 59 months, received more than four Polio vaccine doses, while 16.0% (n=583) had an unknown vaccination status, and 10.0% (n=365) had zero Polio vaccine dose.

PUBLIC HEALTH ACTIONS

- The Ministry of health is coordinating the preparation and implementation of polio vaccination campaigns in the affected provinces and health zones with support from WHO and other implementing partners.
- WHO continues to support the training of national, provincial and health zones surveillance officers on electronic surveillance
- Active Polio case search, case investigation and supportive integrated supervisions in the affected health zones are ongoing.
- Annual review of environmental surveillance sites is ongoing, and investigations of polioviruses isolated from environmental samples are underway.

SITUATION INTERPRETATION

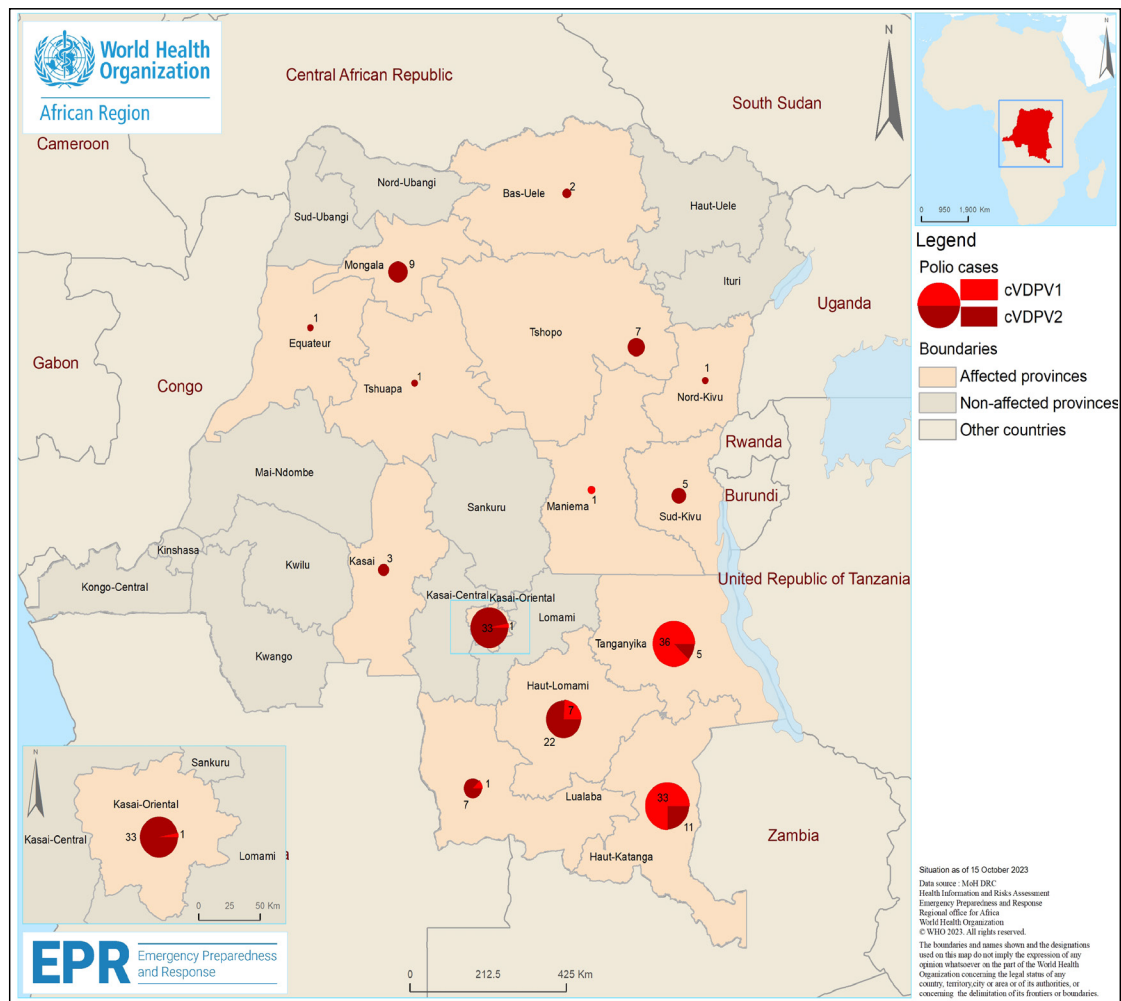

Vaccine derived Polio disease remains a public health concern in DRC. While efforts have been made to fulfill two key indicators, namely AFP case investigation within 48 hours, and stool sample collection adequacy,

[Go to overview](#)

[Go to map of the outbreaks](#)

there still a need to strengthen cases notification within 7 days of the onset of paralysis and ensure that samples are shipped to the laboratory within 3 days or less. It's worth noting a significant community involvement in reporting AFP cases, with nearly 36% of AFP cases reported. The Government along with its partners should enhance and maintain quality routine polio vaccination activities, as well as targeted response efforts in hard-to-reach areas to achieve the national and global polio eradication objectives.

Distribution of cases of cVDPV1 and cVDPV2 by province in the Democratic Republic of the Congo, as of 15 October 2023

Mauritania

Diphtheria

8
Cases

4
Deaths

50.0%
CFR

EVENT DESCRIPTION

On 19 October 2023, the Mauritanian Ministry of Health reported suspected cases of Diphtheria. The first case had onset of symptoms on 8 October 2023. He sought medical attention on 11 October with additional symptoms including fever, facial edema, false membranes and foul-smelling whitish deposits in the pharynx, sputum, unilateral swelling, tonsillar phlegmon, epistaxis, bleeding gums, and toothache.

During epidemiological week 42 (ending 22 October 2023), a total of eight suspected cases, including four deaths (CFR 50.0%), were reported from Bassiknou hospital in Bassiknou district (Moughataas), in Hodh el Chargui region (Wilaya).

Five (62.5%) cases were females and three (37.5%) were males, with ages ranging between 2-20 years old. Samples have been collected from two (25.0%) cases and are currently being processed at the National Institute of Public Health Research Laboratory. Only one (12.5%) of the eight suspected cases was vaccinated against diphtheria (Penta 3).

PUBLIC HEALTH ACTIONS

- ▶ The National Public Health Emergency Operations Center (PHEOC) has been activated and an incident management system has been established. Coordination meetings are being held three times a week at the PHEOC.
- ▶ A multidisciplinary team, including two epidemiologists, two emergency physicians and a bacteriologist, was deployed to the region to support the investigation and response, and to provide medicines and equipment to the bacteriology unit.
- ▶ Samples are being analyzed at the National Institute of Public Health Research Laboratory.

SITUATION INTERPRETATION

The Mauritanian Ministry reported suspected Diphtheria cases on 19 October 2023. Only one of the eight suspected cases had been vaccinated with the Penta 3 vaccine

and two cases are awaiting laboratory confirmation. One of the primary public health interventions to control Diphtheria outbreak is diphtheria vaccination. However, sub-optimal vaccination coverage in Mauritania, with 76.0% reported nationwide in 2022, remains a significant challenge. Enhancing surveillance, laboratory testing, and vaccination activities is crucial to timely detect, confirm, and respond to potential outbreaks.

IMS meeting at the CNOUSP, with the participation of the director of CH Bassiknou

Distribution of suspected cases of Diphtheria by province in Mauritania, as of 21 October 2023

All events currently being monitored by WHO AFRO

Country	Event	Date notified to WCO	Start of reporting period	End of reporting period	Total cases	Cases Confirmed	Deaths	CFR
New Events								
Mauritania	Diphtheria	10/26/2023	10/8/2023	10/19/2023	8		4	50.00%
On 19 October 2023, the Mauritanian Ministry of Health reported suspected cases of diphtheria. The first case had onset of symptoms on 8 October 2023. A total of eight suspected cases, including four deaths, have been reported as of 29 October 2023.								
Ongoing Events								
Algeria	COVID-19	2/25/2020	2/25/2020	8/24/2023	271 853	271 853	6881	2.50%
From 25 February 2020 to 24 August 2023, a total of 271 853 confirmed cases of COVID-19 with 6 881 deaths have been reported from Algeria.								
Algeria	Diphtheria	8/3/2023	8/3/2023	8/3/2023	80	16	0	0.00%
On August 3, 2023, the Ministry of Health announced emergency measures to contain a diphtheria outbreak in the southern regions. There have been 80 cases, including 16 confirmed cases reported.								
Algeria	Poliomyelitis (cVDPV2)	7/14/2022	4/11/2022	10/25/2023	3	3	-	-
According to Global Polio Eradication Initiative, no case of circulating vaccine-derived poliovirus type 2 (cVDPV2) was reported this week. There were three cases reported in 2022.								
Angola	COVID-19	3/21/2020	3/21/2020	10/16/2023	105968	105968	1936	1.80%
The first confirmed COVID-19 case was reported in Angola on 21 March 2020. As of 16 October 2023, 105 968 confirmed COVID-19 cases have been reported in the country, with 1 936 deaths.								
Benin	COVID-19	3/17/2020	3/16/2020	5/3/2023	28014	28 014	163	0.60%
The Ministry of Health in Benin announced the first confirmed case of COVID-19 on 16 March 2020. As of 3 May 2023, a total of 28 014 cases have been reported in the country, with 163 deaths and 27 847 recoveries.								
Benin	Poliomyelitis (cVDPV2)	8/8/2019	8/24/2019	10/25/2023	30	30	0	0.00%
There have been three cases reported in 2023. There are 13 cases reported in 2022. Six cases were reported in 2021 and 2020, and eight in 2019.								
Botswana	COVID-19	3/30/2020	3/30/2020	10/23/2023	330321	330 321	2799	0.90%
On 30 March 2020, the Minister of Health and Wellness in Botswana reported three confirmed cases of COVID-19. As of 13 October 2023, a total of 330 321 confirmed COVID-19 cases were reported in the country including 2 799 deaths.								
Burkina Faso	Humanitarian crisis (Sahel Region)	1/1/2019	1/1/2019	10/26/2023	2100000	-	-	-
Since 2015, the security situation in the Sahel and Eastern Burkina Faso has gradually deteriorated due to attacks by armed groups. Access to healthcare services remains a major challenge for the affected population. As of October 2023, 5.5million People were in need of humanitarian assistance and over 2.0million IDPs registered. The situation remains fluid.								
Burkina Faso	Chikungunya	9/6/2023	9/19/2023	10/15/2023	282	282	0	0.00%
On 6 September 2023, the reference laboratory for viral haemorrhagic fevers confirmed a case of chikungunya in a patient from the Pouytenga health district whose sample was collected as part of sentinel surveillance for dengue and other arboviruses. As of 15 October 2023, 282 PCR-confirmed cases and 0 deaths have been reported, including 75 cases in week 41.								
Burkina Faso	COVID-19	3/10/2020	3/9/2020	5/3/2023	22056	22 056	396	1.80%
Between 9 March 2020 and 3 May 2023, a total of 22 056 confirmed cases of COVID-19 with 396 deaths and 21 596 recoveries have been reported from Burkina Faso.								
Burkina Faso	Dengue fever	9/11/2023	1/1/2023	9/19/2023	6 703	128	48	0.70%
From the beginning of the outbreak in January to September 19, 2023, a total of 6 703 suspected cases have been documented, with 2 494 probable cases and 48 fatalities. The Dengue outbreak in Burkina Faso is confined to the eight districts of the Hauts-Bassins region in the Western part of the country								
Burundi	Cholera	1/1/2023	12/14/2022	10/29/2023	1244	175	9	0.70%
The ongoing cholera outbreak was officially declared on 1 January 2023. Cumulatively, a total of 1 244 cases with nine deaths (CFR 0.7%) have been reported as of 29 October 2023								
Burundi	COVID-19	3/31/2020	3/18/2020	10/1/2023	54 366	54 266	15	0.00%
On 31 March 2020, the Minister of Health in Burundi reported the first two confirmed cases of COVID-19. As of 10 September 2023, the total number of confirmed COVID-19 cases is 54 366, including 54 266 recoveries and 15 deaths.								

Burundi	Poliomyelitis (cVDPV2)	3/17/2023	1/1/2022	10/5/2023	2	2	0	0.00%
No cVDPV2 case was reported this week. There is one case reported this year and one last year.								
Cameroon	Humanitarian crisis (North, Adamawa & East)	12/31/2013	6/27/2017	10/10/2023	-	-	-	-
Cameroon hosts about 460 000 refugees and asylum-seekers. Refugees from the Central African Republic are mostly hosted in the rural refugees' camps in the eastern part of the country (North, Adamawa, and East) and are estimated to be 352 938 refugees by the UNHCR as of 31 August 2023.								
Cameroon	Humanitarian crisis (North-West & South-West)	10/1/2016	6/27/2018	10/2/2023	-	-	-	-
In the North-West and South-West regions, the unstable security situation and persistent violence are exacerbating humanitarian needs. Affected people continue to flee their homes to neighboring villages and communities. Between January and July 2023, humanitarian and security partners reported the displacement of more than 42 000 people in both regions								
Cameroon	Humanitarian crisis (Sahel Region)	12/31/2013	6/27/2017	10/2/2023	-	-	-	-
In Cameroon, the Far North region faces the triple burden of conflicts in the Lake Basin Chad, the socioeconomic impact of the Russian-Ukrainian crisis and natural hazards including floods, all this continue to drive the humanitarian needs in that region and are happening in the context of underfunded humanitarian response plan								
Cameroon	Cholera	8/31/2021	10/25/2021	10/12/2023	20933	2 050	492	2.40%
From 25 Oct 2021 to 12 October 2023, a total of 20 933 cases of cholera including 2 050 laboratory-confirmed cases and 492 deaths (CFR 2.4%) have been reported from nine regions. Three regions are still active (Centre, Littoral, and South-West). Patients' ages range from 2 months to 103 years with a median of 28 years, and the sex ratio M/F is 1.3.								
Cameroon	COVID-19	3/6/2020	3/6/2020	10/8/2023	125205	125205	1974	1.60%
The Cameroon Ministry of Health confirmed the first COVID-19 case on 6 March 2020. As of 8 October 2023, 125 205 cases have been reported, including 1 974 deaths.								
Cameroon	Measles	4/2/2019	1/1/2023	10/8/2023	6508	6 008	30	0.50%
From week 1 through week 40 (ending 08 October 2023), 6 008 confirmed measles cases have been reported in Cameroon, including 429 IgM+, 50 clinically compatible and 5529 epidemiologically linked. At least 30 related deaths (CFR 0.5%) have been reported in 2023.								
Cameroon	Mpox	2/24/2022	1/1/2022	10/12/2023	45	45	3	6.70%
From 1 January to 12 October 2023, 108 suspected cases of Mpox, including 27 laboratory-confirmed and no deaths have been reported. In 2022, 18 confirmed cases and three deaths were reported in the country.								
Cameroon	Poliomyelitis (cVDPV2)	5/23/2019	1/1/2020	10/1/2023	13	13	0	0.00%
There were three cases reported in 2022, three others reported in 2021, and seven cases reported in 2020.								
Cape Verde	COVID-19	3/19/2020	3/18/2020	7/8/2023	64143	64 143	414	0.60%
The first confirmed COVID-19 case was reported in Cape Verde on 19 March 2020. As of 8 July 2023, 64 143 confirmed COVID-19 cases, including 414 deaths and 63 645 recoveries, were reported in the country.								
Central African Republic	Humanitarian crisis	12/11/2013	12/11/2013	10/4/2023	-	-	-	-
The protracted humanitarian crisis in Central African Republic (CAR) is still presenting worrying situations. Recently, the northwest part of the country received over 37 000 Chadians, mainly women and children seeking refuge due to insecurity in their villages. More to that, since April this year, a total of 18 545 Sudanese refugees and returnees arrived in the north-east prefecture of Vakaga, seeking safety from the ongoing conflict in Sudan. These displacements have exacerbated the humanitarian situation in those regions.								
Central African Republic	COVID-19	3/14/2020	3/14/2020	6/18/2023	15404	15 404	113	0.70%
The Ministry of Health and Population announced the confirmation of the first COVID-19 case in the Central African Republic on 14 March 2020. As of 18 June 2023, a total of 15 404 confirmed cases, 113 deaths and 15 252 recoveries were reported.								
Central African Republic	Measles	3/13/2022	1/1/2023	8/20/2023	2055	1 145	3	0.10%
From week 1 to week 33 (ending 20 August 2023), the Ministry of Health and Population has recorded 1 145 confirmed measles cases, including 102 laboratory-confirmed cases, 1 043 epidemiologically linked cases. Three deaths have been reported. The measles outbreak is ongoing in 13 (37%) out of 35 health districts								
Central African Republic	Mpox	3/3/2022	3/4/2022	5/28/2023	31	31	1	3.20%

From 4 March 2022 to 28 May 2023, 31 confirmed cases of Mpox and one death have been reported in the country. Since the start of 2023, the country has reported 14 laboratory-confirmed cases, including one death. The last cases were reported during week 21 (ending 28 May) in from Baboua-Abba and Paoua districts.								
Central African Republic	Poliomyelitis (cVDPV2)	5/24/2019	5/24/2019	10/1/2023	46	46	0	0.00%
Fifteen cases have been reported in the country this year. In addition, six cases were reported in 2022. Although no new cases were reported in 2021, four cVDPV2 cases were reported in 2020 and 21 cases in 2019 from several outbreaks.								
Central African Republic	Yellow Fever	6/12/2023	1/1/2023	8/20/2023	5	5	0	0.00%
There is an ongoing yellow fever outbreak in the Central African Republic (CAR). This year from week 1 through week 33 (ending 20 August) , five confirmed cases of yellow fever were recorded including four new confirmed cases following the classification conducted on 7 July 2023 , these new confirmed cases are from the following districts : Sangha-Mbaéré (1), Berbérati (1) and Bambari (2).								
Chad	Humanitarian crisis (Sahel region)	2/11/2022	3/1/2016	10/4/2023	-	-	-	-
Chad is consistently facing multidimensional crises including conflict induced displacements, nutritional crisis, natural disasters due to climate changes, epidemics, economic crisis, and political instability. Regarding the ongoing conflict in Sudan, there is no immediate prospect of resolving the conflict and since mid-April, hundreds of Sudanese refugees, and Chadian returnees, including wounded, continue to cross the border to seek refuge in Chad. Since the beginning of the Sudanese crisis and as of 22 September, UNHCR has counted 420 834 refugees. IOM has reported 52 786 returnees. Among refugees, 85 % are women and children and 67 % of the returnees are children under 18.								
Chad	COVID-19	3/19/2020	3/19/2022	5/3/2023	7822	7 822	194	2.50%
The first confirmed COVID-19 case was reported in Chad on 19 March 2020. As of 26 April 2023, a total of 7 822 confirmed COVID-19 cases were reported in the country, including 194 deaths.								
Chad	Dengue	8/5/2023	8/6/2023	10/1/2023	1342	41	1	0.10%
Chad health authorities declared the dengue outbreak officially on 15 August 2023. As of 1 October 2023, a total of 1 342 suspected cases, 41 confirmed and one death are reported.								
Chad	Measles	5/24/2018	1/1/2023	8/6/2023	8 984	820	4	0.00%
As of Week 31 of 2023 (ending 6 August), 8 489 suspected cases and four measles-related deaths (CFR 0.1%) have been reported from 143 out of 150 districts in Chad. A total of 820 samples tested IgM positive for measles and 178 tested IgM+ for rubella.								
Chad	Poliomyelitis (cVDPV2)	10/18/2019	9/9/2019	10/1/2023	193	193	0	0.00%
There have been 34 cases reported this year. In addition, 44 cVDPV2 cases were reported in 2022, 106 cVDPV2 cases were reported in 2020 from three different outbreaks and nine others were reported in 2019.

Kenya	Food insecurity	2/17/2022	1/1/2022	9/30/2023	-	-	-	-
Climate forecasts indicate that the October to December 2023 short rains in northern and eastern Kenya will likely have an early onset and be cumulatively above average, supported by a strong El Niño event. The rains are expected to improve forage, pasture, and water resources in pastoral areas, supporting livestock body. However, there is an elevated risk that the above-average rainfall will result in flooding in the flood-prone parts of the country and outbreaks of diseases like Rift Valley Fever in pastoral areas. Pastoral areas remain in Crisis (IPC Phase 3) as the pastoral lean season concludes								
Kenya	Anthrax		4/10/2023	10/23/2023	20		3	15.00%
As of 31st August 2023, cumulative 20 cases and 3 deaths were reported. 17 of these cases and 3 deaths were reported In April-May 2023, In August 2023, 3 new cases emerged in Kandara sub-county, all cases were linked to the handling of an infected animal. No new cases have been reported after August.								
Kenya	Cholera	10/19/2022	10/5/2022	10/22/2023	12 121	577	202	-
A cholera outbreak has been ongoing in Kenya since 26 October 2022. As of 22 October 2023, a total of 12 121 cases, with 577 confirmed by culture, and 202 deaths (CFR 1.7%) have been reported in 27 affected Counties.								
Kenya	COVID-19	3/13/2020	3/13/2020	10/24/2023	343999	343 999	5689	1.70%
On 12 March 2020, the Ministry of Health announced the confirmation of one new COVID-19 case in the country. As of 18 October 2023, 343 955 confirmed COVID-19 cases have been reported, including 5 689 deaths and 44 new cases in the country.								
Kenya	Leishmaniasis (visceral)	3/31/2019	1/3/2020	10/22/2023	2 395	2 205	10	-

The first case was a 58-year-old male from Tevarett district of Nouakchott North region who had reportedly been infected in the Ouad Naga district of Trarza region and developed a febrile illness on 17 July 2023. He was tested and died in Dakar, Senegal, on 26 July 2023. His results returned positive for CCHF on 27 July 2023. The second case is a 23-year-old female from Libheir locality in Barkeol district of Assaba region with date of symptom onset as of 5 September 2023. She tested positive for CCHF by RT-PCR on 9 September 2023. No epidemiological link was established between the two confirmed cases.								
Mauritania	Measles	3/7/2023	12/26/2022	9/17/2023	730	269	5	0.70%
Mauritania has been experiencing a measles outbreak since early 2023. A total of 20 districts have reached the epidemic threshold, including four currently experiencing an outbreak (Kaédi, Ksar, Monguel et Rosso). As of 17 September 2023, the country has reported 730 suspected cases of measles (269 confirmed, including 173 laboratory-confirmed cases and 96 epidemiologically linked cases). Five deaths, including two community deaths, have been reported among confirmed cases.								
Mauritius	COVID-19	3/18/2020	3/18/2020	10/1/2023	295883	295 883	1052	0.40%
The Republic of Mauritius announced the first three positive cases of COVID-19 on 18 March 2020. As of 1 October 2023, a total of 295 883 confirmed COVID-19 cases, including 1 052 deaths have been reported in the country.								
Mauritius	Dengue fever	7/10/2023	6/8/2023	10/1/2023	262		0	0.00%
Mauritius has been experiencing an outbreak of dengue fever since early June. As of 1 October 2023, 262 suspected cases have been reported, including 203 in Mauritius Island and 59 in Rodrigues Island.								
Mozambique	Humanitarian crisis in Cabo Delgado	1/1/2020	10/12/2023	8/6/2023	-	-	-	-
Most poor and very poor households in Mozambique face Minimal (IPC Phase 1) outcomes as the ongoing harvest improves food access and availability. In Cabo Delgado, ongoing humanitarian assistance drives Stressed (IPC Phase 2) outcomes, with Crisis (IPC Phase 3) outcomes persisting in conflict-affected areas. There have been a reduced number of attacks.								
Mozambique	Cholera	9/14/2022	10/12/2023	10/23/2023	34943	34 943	146	0.40%
The current cholera outbreak in the country started in Niassa province on 14 September 2022. As of 15 October 2023, 34 943 cholera cases have been recorded with 146 deaths (CRF 0.4%) in 11 affected provinces, 65 of the 67 affected districts have ended the outbreak.								
Mozambique	COVID-19	3/22/2020	3/22/2020	10/23/2023	233654	233 654	2249	1.00%
The first confirmed COVID-19 case was reported in Mozambique on 22 March 2020. As of 18 October 2023, a total of 233 654 confirmed COVID-19 cases were reported in the country, including 2 249 deaths.								
Mozambique	Poliomyelitis (cVDPV2)	12/7/2018	1/1/2021	10/23/2023	6	6	0	0.00%
According to the Global Polio Eradication Initiative, no case of circulating vaccine-derived poliovirus type 2 (cVDPV2) was reported this week. The number of cases in 2022 remains four. There were two cases reported in 2021. No cVDPV2 cases reported in 2023								
Mozambique	Poliomyelitis (WPV1)	5/17/2022	5/18/2022	10/4/2023	8	8	0	0.00%
According to the Global Polio Eradication Initiative, there was no WPV1 case reported this week. There were eight cases reported on 10 August 2022.								
Namibia	COVID-19	3/14/2020	3/14/2020	7/9/2023	171998	171 998	4098	2.40%
The first case of COVID-19 was detected in Namibia on the 14 March 2020. As of 9 July 2023, a total of 171 998 confirmed cases with 4 098 deaths have been reported.								
Niger	Humanitarian crisis (Sahel region)	2/1/2015	2/1/2015	10/30/2023	4 300 000	-	-	-
The number of internally displaced people in Niger has reached a record high, with an increase from 1.9 million in 2017 to 4.3 million individuals (15% population) in 2023, indicating a significant rise in the need for humanitarian assistance. On 28 July, Niger experienced a military coup and this marks the third Sahel country in less than three years. Acute food insecurity affects 3.3 million people, while a staggering 7.3 million are at risk of their situation deteriorating due to the ongoing crisis.								
Niger	COVID-19	3/19/2020	3/19/2020	5/1/2023	9513	9 513	315	3.30%
From 19 March 2020 to 1 May 2023, a total of 9 513 cases with 315 deaths have been reported across the country. A total of 9 203 recoveries have been reported from the country.								
Niger	Diphtheria	8/28/2023	7/4/2023	10/23/2023	1 690	100	75	4.40%
An outbreak of diphtheria has been confirmed in Matameye health district, Zinder region. The first case was reported on 17 July 2023. As of 23 October 2023, a total of 1690 suspected cases, including 75 deaths (CFR:4.4) were reported from 20 health districts. Public health response activities are ongoing in affected districts.								
Niger	Measles	4/5/2022	1/1/2022	10/16/2023	1802	567	0	0.00%
As of epidemiological week 41, 2023 (ending 16 October), 1 802 suspected measles cases were reported, of which 995 were investigated across 66 districts in the eight regions. Of these cases, 57% (n=578) were laboratory-confirmed. Additionally, 91% (n=66) of the districts reported at least one suspected case, and 36 (49%) health districts have reached the epidemic threshold since the beginning of the year.								
Niger	Meningitis	12/7/2022	10/31/2022	10/16/2023	2261	736	129	5.70%
A meningitis outbreak was declared in the Dungass health district in Zinder region. The first case was reported on 31 October 2022 and confirmed on 23 November 2022, with Neisseria meningitidis identified as the causative agent. As of 16 October 2023, 2 261 suspected cases of meningitis, including 736 laboratory-confirmed cases and 129 deaths (CFR 5.7%) were reported.								
Niger	Poliomyelitis (cVDPV2)	1/1/2020	1/1/2021	10/25/2023	34	34	0	0.00%

No new case of cVDPV2 was reported during this week. The total number of cases reported in 2022 is 16. There were 18 cases reported in 2021.								
Nigeria	Humanitarian crisis (Sahel region)	10/10/2016	10/10/2016	9/7/2023	8 300 000	8 300 000		-

South Sudan	Food insecurity	12/18/2020	4/5/2021	10/9/2023	-	-	-	-
As per the Famine Early Warning Systems Network (FEWS NET) food security outlook June 2023 to January 2024 for South Sudan, the country continues to face extremely high levels of acute food insecurity, with over 60 % of the population anticipated to face Crisis (IPC Phase 3) or worse outcomes. A risk of Famine persists until at least the main harvest, despite relative calm and less intense flood risk.								
South Sudan	Humanitarian crisis	8/15/2016	8/15/2016	10/3/2023	9400000	-	-	-
The number of people in need of humanitarian assistance is estimated to be 9.4 million this year in South Sudan according to the humanitarian community. With the ongoing conflict in Sudan, as of 29 September, 291 224 individuals have been recorded at border crossing into South Sudan since the fighting in Sudan erupted on 15 April 2023.								
South Sudan	COVID-19	4/5/2020	4/5/2020	10/4/2023	18368	18368	138	0.80%
On 5 April 2020, the Ministry of Health of South Sudan reported the country's first case of COVID-19. As of 4 October 2023, a total of 18 368 confirmed COVID-19 cases were reported in the country including 138 deaths								
South Sudan	Hepatitis E	1/3/2018	1/1/2019	8/27/2023	4253	1 517	27	0.60%
The current outbreak in the Bentiu IDP camp is ongoing. In 2023, 326 cases of AJS have been reported, of which 28 tested positive for HEV by RDT. As of 27 August 2023, a total of 4 253 cases of acute jaundice syndrome (AJS) including 27 deaths (CFR 0.7%) have been reported since January 2019.								
South Sudan	Measles	2/23/2022	1/1/2023	10/15/2023	6328	521	149	2.40%
In 2023, from week 1 through week 41 (ending 15 October) a total of 6 328 with 149 related deaths have been reported with a CFR of 2.4% . More than 66% of cases are in children less than five years of age with 75% of all related deaths.								
Tanzania, United Republic of	Cholera	10/3/2023	9/7/2023	10/28/2023	548	53	14	2.60%
On 3 October 2023, WHO was notified about a Cholera outbreak affecting three regions of Tanzania Mainland: Mara, bordering Kenya, Arusha and Kigoma. As of 28 October 2023, a total of 548 cases including 14 deaths (CFR 2.6%) were reported from eleven districts of Mara, Kigoma, Arusha, Kilimanjaro, and Singida regions. Four cases were admitted in Singida (3) and Arusha (1). Of the 72 samples tested by culture, 53 showed growth of Vibrio cholerae. Women account for 55.5% (304) of cases, and 44.7% (245) of cases are aged between 15 and 44 years.								
Tanzania, United Republic of	COVID-19	3/16/2020	3/16/2020	10/23/2023	43078	43 078	846	2.00%
The Ministry of Health, Community Health, Community Development, Gender, Elderly and Children in Tanzania reported the country's first case of COVID-19 on 16 March 2020. As of 18 October 2023, a total of 43 078 confirmed cases have been reported in Tanzania Mainland including 846 deaths.								
Tanzania, United Republic of	Poliomyelitis (cVDPV2)	7/19/2023	7/17/2023	9/21/2023	3	1	0	0.00%
2 new cVDPV2 cases was reported in week 35. 3 suspected cases have been reported cummulative.								
Togo	COVID-19	3/6/2020	3/1/2020	5/3/2023	39483	39 483	290	0.70%
On 6 March 2020, the Ministry of Health and Public Hygiene of Togo announced the confirmation of its first case of COVID-19. As of 3 May 2023, a total of 39 483 cases, including 290 deaths and 39 178 recovered cases, have been reported in the country.								
Togo	Poliomyelitis (cVDPV2)	10/18/2019	9/13/2019	10/26/2023	19	19	0	0.00%
No cVDPV2 case was reported this week. There were two cases reported in 2022. No cases were reported in 2021. There were nine cases in 2020, while the total number of cVDPV2 cases reported in 2019 remains at eight.								
Uganda	Food insecurity	2/17/2022	1/1/2022	9/30/2023	-	-	-	-
As per the Acute food insecurity classification reported in September 2023 by the Famine Early Warning Systems Network (FEWS NET), in Karamoja, below-average and erratic rainfall between April and August caused poor short-cycle harvests in August and September. Consequently, poor households saw only minimal improvements in food access and availability in the post-harvest period.								
Uganda	Cholera	7/25/2023	7/25/2023	9/14/2023	80	31	10	12.50%
Cholera outbreak was officially confirmed on 25 July, 2023 after three samples turned positive for cholera in Uganda. The four samples were collected from suspected cholera cases from Sigulu Islands, Namayingo district. Cumulatively, 81 cases of cholera with 10 deaths have been reported as of 14 September 2023.								
Uganda	COVID-19	3/21/2020	3/21/2020	8/28/2023	171843	171843	3632	2.10%
The first COVID-19 confirmed case was reported in Uganda on 21 March 2020. As of 28 August 2023, a total of 171 843 confirmed COVID-19 cases with 3 632 deaths were reported.								
Uganda	Malaria	6/5/2023	7/2/2023	10/1/2023	-	-	-	-
Malaria outbreak is still ongoing in Uganda. The districts of Tororo, Bugiri, Butaleja, Budaka, Pallisa, Namutumba and Butebo, Kumi and Alebtong, have seen cases drop to below epidemic thresholds following several interventions. During the last reporting period (week 39), a total of 194 226 cases and 18 deaths have been reported and only three districts are now in outbreak.								
Uganda	Meales	10/4/2023	9/28/2023	9/30/2023	11	6	0	0.00%

The Ministry of Health declared a measles outbreak on 28 September 2023 following confirmation of suspected measles cases at the Uganda Virus Research Institute (UVRI) from Panyadoli Health Center IV in Kiryandongo District. As of 30 September 2023, 11 suspected cases with six confirmed cases and no deaths have been reported.								
Uganda	Rift Valley fever (RVF)	9/25/2023	1/1/2023	9/10/2023	181	53	13	7.20%
Between week 1 and week 36 (week ending 10 September 2023), a total of 181 suspected cases of RVF including 53 confirmed and 13 deaths (CFR 7.2%) were reported from Kabale, Rubanda, Mbarara, Isingiro, Bushenyi, Nakaseke, Kazo and Kakumiro districts. In week 36, districts with active human RVF outbreaks were Kakumiro, Mbarara and Nakaseke districts. The last RVF case from Kakumiro district was confirmed on 4 September 2023.								
Zambia	Cholera	1/24/2023	1/20/2023	9/10/2023	887	329	19	2.10%
Cumulatively, 887 cases from eight districts; Mpulungu, Vubwi, Nsama, Nchelenge, Mwansabombwe, Chipata, Chipangali and Lusangazi. A total of 19 deaths have been reported.								
Zambia	COVID-19	3/18/2020	3/18/2020	5/11/2023	343995	343 995	4058	1.20%
The first COVID-19 confirmed case was reported in Zambia on 18 March 2020. As of 11 May 2023, a total of 343 995 confirmed COVID-19 cases were reported in the country including 4 058 deaths.								
Zambia	Measles	6/13/2022	6/13/2022	8/12/2023	3715	367	31	0.80%
A measles outbreak continues to evolve in Lusaka, North-western and Southern provinces affecting several districts. Cumulatively, the provinces have recorded 3 715 measles cases and 31 deaths as of 12 August 2023.
